

Report
Of
**ARTIFICIAL INTELLIGENCE INTERNSHIP AT
CODEC TECHNOLOGIES**

Submitted
To
School of Computer Science and Engineering
IILM University, Greater Noida, U.P.
In partial fulfilment of the requirement of degree of
B.Tech CSE

Roll Number of Student: 25SCS1003000828
Name of Student: ABHIMANU KUMAR
Batch: 2025-29

CANDIDATE'S DECLARATION

I, ANAND MOHAN JHA do hereby declare that the internship report titled "**Artificial Intelligence Internship at Codec Technologies**" has been completed by me to fulfil the requirement for the award of the degree of Bachelor of Technology in CSE. All the references have been quoted and I have not taken as such any material from any other source. I affirm to you that this report is my own and has not been submitted to any other institute for any degree/diploma requirement and further I shall be solely responsible for any kind of copyright violation in this regard.

Signature
Student Name ABHIMANU KUMAR
Roll No. 25SCS1003000828

ACKNOWLEDGEMENT

I am using this opportunity to express my gratitude to everyone who supported me throughout the Internship Program. I am thankful for their aspiring guidance, invaluable constructive criticism and friendly advice during this work. I am sincerely grateful to them for sharing their truthful and illuminating views on a number of issues related to this work.

I express my gratitude to my parents for their blessings.

A handwritten signature in cursive script that reads "Abhimanu Kr.".

CHAPTER 3

INTERNSHIP COMPLETION CERTIFICATE

CHAPTER 4

PROJECT DESCRIPTION

4.1 Introduction

The internship report titled "**Artificial Intelligence Internship at Codec Technologies**" documents the practical learning and professional exposure gained during the internship at **Codec Technologies Pvt. Ltd.**. The internship was completed from **31 July 2026 to 31 August 2026** in the role of **Artificial Intelligence Intern**, under a one-month AICTE and ICAC approved internship program.

The internship focused on building a foundational, practical understanding of Artificial Intelligence concepts, tools, and workflows. It covered exposure to core AI ideas, hands-on practice with commonly used platforms, and an introduction to how AI-based systems are conceived, built, and evaluated.

This project description presents the internship from an academic and process-oriented perspective. It explains the organizational context, the learning problem addressed, objectives, scope, tools, a conceptual system architecture, methodology, and expected outcomes. The report is based on the domain and duration recorded in the official internship certificate.

Project Theme: Foundational concepts, tools, and workflow exposure in Artificial Intelligence, completed as part of an AICTE and ICAC approved internship program.

4.2 Organization Profile

Codec Technologies Pvt. Ltd. is the organization where the internship was completed. The official internship certificate identifies the organization as the host for the Artificial Intelligence Intern role, delivered as part of an AICTE and ICAC approved internship program and recognized as a Google for Education Partner.

The internship environment provided exposure to foundational Artificial Intelligence concepts and practical, guided learning activities. The certificate confirms the completion of a structured, one-month internship program conducted under this framework.

From the internship perspective, the organization profile is relevant because the program connects academic learning in Artificial Intelligence with practical, project-oriented exposure, supported by recognized educational and skilling partnerships.

4.3 Problem Statement

Artificial Intelligence is a broad and fast-evolving field in which learners often struggle to move from theoretical concepts to practical, hands-on understanding. Without structured guidance, it can be difficult to connect core AI concepts with real tools, workflows, and problem-solving approaches.

The internship therefore addressed a practical learning problem: **how to build a working understanding of core Artificial Intelligence concepts and apply them through guided, hands-on exercises within a structured internship program.**

The problem was approached from a learning-and-application perspective rather than by building a single large-scale production system. The program required understanding foundational AI concepts, practicing with relevant tools, and completing guided tasks to reinforce learning.

A structured internship framework helps reduce the gap between theory and practice, improves confidence in applying AI concepts, and supports the development of problem-solving ability within a real-world-inspired setting.

4.4 Project Objectives

- 1. Understand core AI concepts:** Gain a practical understanding of the fundamentals of Artificial Intelligence, including how intelligent systems are designed and evaluated.
- 2. Explore machine learning basics:** Build familiarity with basic machine learning ideas, workflows, and terminology used in AI projects.
- 3. Practice with AI tools and platforms:** Gain hands-on exposure to commonly used AI/ML tools and development environments.
- 4. Apply concepts to guided tasks:** Work through structured exercises and mini-tasks that reinforce theoretical learning.
- 5. Develop problem-solving skills:** Strengthen the ability to break down problems and approach them using AI-based thinking.
- 6. Develop professional skills:** Strengthen communication, time management, documentation, and self-directed learning abilities.
- 7. Understand AI workflow structure:** Observe how data, models, and evaluation stages fit together in a typical AI project pipeline.
- 8. Complete a recognized internship program:** Successfully fulfil the requirements of the AICTE and ICAC approved internship program.

4.5 Scope of the Project

The scope of this internship project is limited to foundational learning and applied exposure in Artificial Intelligence, within the structure of a one-month AICTE and ICAC approved internship program.

Area	Scope Covered
Core AI Concepts	Understanding fundamental concepts of Artificial Intelligence and intelligent systems.
Machine Learning Basics	Introductory exposure to machine learning ideas, terminology, and workflow.
Tools & Platforms	Practicing with AI/ML tools and development environments used during the program.
Guided Exercises	Completing structured tasks and mini-exercises to reinforce learning.
Professional Development	Building communication, time management, documentation, and self-learning skills.
Program Completion	Fulfilling the requirements of the AICTE and ICAC approved internship program.

The scope does not claim ownership of a deployed, production-grade AI system unless specifically documented elsewhere. The internship evidence primarily supports a foundational-learning and applied-exposure role in Artificial Intelligence.

4.6 Technologies and Tools Used

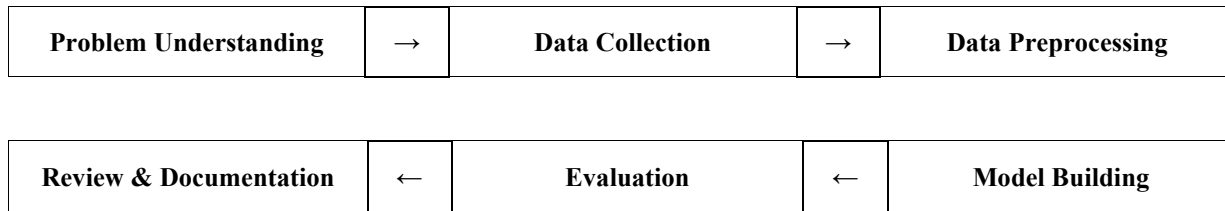

The internship program, delivered by Codec Technologies as a Google for Education Partner, involved exposure to common AI/ML tools, programming practices, and cloud-based learning platforms that supported the foundational nature of the program.

Tool / Technology	Use in the Internship Context
Python	Primary language used for AI/ML learning exercises and scripting.
Google Colab / Jupyter Notebook	Cloud-based and local notebook environments for hands-on AI practice.
Machine Learning Libraries	Exposure to common libraries used for data handling and basic model building.
Google for Education Tools	Learning resources and platforms accessed through the Google for Education partnership.
Documentation & Reporting	Recording learning progress and completed exercises for review.

In addition to tools, the internship required process skills such as self-directed learning, time management, documentation, and problem-solving, consistent with the structure of the AICTE and ICAC approved program.

4.7 System Architecture

Because the internship project was focused on foundational AI learning rather than deploying a large-scale production system, the architecture below represents a conceptual AI learning-and-application workflow. It shows how work typically moves from problem understanding through data handling, model building, evaluation, and review.

Conceptual workflow derived from the internship program's Artificial Intelligence learning track.

Workflow interpretation: A learning task begins with understanding the problem, followed by collecting and preparing relevant data. A basic model is then built and evaluated, and the results are reviewed and documented. The cycle repeats as new concepts and exercises are introduced.

This architecture is a process model prepared from the domain and duration recorded in the internship certificate; it is not presented as a proprietary internal system architecture of Codec Technologies.

4.8 Methodology

A structured, guided-learning-and-practice-based methodology was followed during the internship. The methodology emphasizes understanding core concepts first, then reinforcing them through hands-on tools and exercises.

Step	Activity	Purpose
1	Understand the fundamentals	Become familiar with core AI concepts, terminology, and use cases.
2	Set up tools	Configure Python, notebooks, and required libraries for practice.
3	Practice with data	Work with sample datasets to understand collection and preprocessing.
4	Build basic models	Apply foundational machine learning techniques to guided exercises.
5	Evaluate results	Review outputs and understand basic evaluation approaches.
6	Document learning	Maintain records of concepts covered and exercises completed.
7	Review & improve	Use feedback and practice experience to reinforce understanding.

The methodology reflects the practical, foundational nature of the internship and aligns with the certificate's description of a one-month AICTE and ICAC approved Artificial Intelligence internship program.

4.9 Expected Outcomes

1. A practical, foundational understanding of Artificial Intelligence concepts.
2. Improved familiarity with basic machine learning workflows and terminology.
3. Hands-on exposure to Python and common AI/ML tools and notebooks.
4. Better understanding of how data, models, and evaluation fit together in AI workflows.
5. Stronger problem-solving skills through guided, hands-on exercises.
6. Practical exposure to Google for Education tools and platforms.
7. Greater confidence in approaching AI-related problems and projects.
8. Development of professional skills including documentation, time management, and self-directed learning.

The internship completion certificate confirms that the program was conducted as a one-month, AICTE and ICAC approved internship in the domain of Artificial Intelligence, delivered by Codec Technologies as a Google for Education Partner.

4.10 Certificates of Completion and Other Communication Mail Proof

The official **Internship Completion Certificate** issued by Codec Technologies Pvt. Ltd. is attached as **Chapter 3** of this report without alteration. It confirms completion of a one-month AICTE and ICAC approved internship from 31 July 2026 to 31 August 2026 in the role of Artificial Intelligence Intern, verified under AICTE ID CORPORATE6759d549ce59e1733940553 and countersigned by Dr. Anurag Shrivastava, Program Manager.

INTERNSHIP OFFER LETTER

Dear Abhimanu kumar,

We are pleased to offer you a 1 Month Internship as Project Intern at Codec Technologies, a global platform dedicated to empowering learners and connecting diverse talent to create meaningful career opportunities worldwide. Codec Technologies delivers dedicated IT and business consultancy services across 27+ countries, empowering global innovation and strategic growth.

Internship Details:

- Designation : Artificial Intelligence Intern
- Location & Mode: Pan India, Hybrid
- Duration : 31/07/2026 to 31/08/2026
- Reporting to : Assigned Project Head(s)

This program provides an immersive experience, enabling you to gain industry-level knowledge and acquire valuable skills. Exceptional interns may also qualify for a scholarship award based on weekly performance reviews conducted by project supervisor.

If you accept this offer and the terms above, please complete your assigned projects and training tasks on our platform and via email.

Best regards,

Sincerely,
Dr. Anurag Shrivastava,
Codec Technologies India
NCS ID: E19E86-0116588288923
Date Of Issue - 31/07/2026

Dr. Anurag Shrivastava
Talent Acquisition Manager
