

IILM University, Greater Noida

INTERNSHIP PRESENTATION

Artificial Intelligence Internship

Google for Education Partner Program • AICTE & ICAC Approved • National Internship Portal

STUDENT NAME

Abhimanu Kumar

ROLL NO.

25SCS1003000828

SECTION

2 CSE 1

PROGRAM & SEMESTER

B.Tech CSE (AI-ML), 3rd Sem

ORGANIZATION

Codec Technologies Pvt. Ltd.

What This Presentation Covers

01

About the Organization

Codec Technologies & the National Internship Portal

02

Internship Overview

Duration, domain and objectives

03

Tools & Technologies

The AI/ML stack used during the internship

04

Project Work

Modules covered and tasks undertaken

05

Skills & Outcomes

Skills gained, challenges and key learnings

06

Certification

Completion certificate and conclusion

About Codec Technologies Pvt. Ltd.

Codec Technologies Pvt. Ltd.

Codec Technologies is an industry training and internship provider that partners with the National Internship Portal to deliver AICTE & ICAC approved, skill-based programs for engineering students. Its internships are designed to bridge the gap between academic learning and industry-ready practice.

- **National Internship Portal**

Program listed and delivered via the Ministry of Education-backed portal

- **AICTE & ICAC Approved**

Internship track certified against national skilling standards

- **Google for Education Partner**

Program delivered in association with Google for Education

PROGRAM SNAPSHOT

1 Month

Internship Duration

AI

Domain Specialization

31/07 – 31/08/2026

Program Dates

Role, Duration & Domain

ROLE

Artificial Intelligence Intern

DURATION

1 Month (31 Jul – 31 Aug 2026)

MODE

Structured, mentor-guided
training

RECOGNITION

AICTE & ICAC approved
certification

The internship offered hands-on exposure to Artificial Intelligence concepts and tools, combining guided learning modules with applied project work, under the AICTE & ICAC approved framework of the National Internship Portal.

Objectives of the Internship

1

Build strong foundations in Artificial Intelligence and Machine Learning concepts.

2

Gain hands-on experience with real-world AI tools, libraries and workflows.

3

Apply classroom knowledge to practical, industry-style project tasks.

4

Develop problem-solving, analytical and independent-research skills.

5

Understand how AI solutions are planned, built and evaluated in industry.

6

Earn an AICTE & ICAC approved certification recognized on the National Internship Portal.

Tools & Technologies Used

Python

Core programming language for AI/ML development

NumPy & Pandas

Data handling, cleaning and analysis

Scikit-learn

Classical machine learning algorithms

TensorFlow / Keras

Building and training neural networks

Jupyter Notebook

Interactive experimentation environment

Google Colab

Cloud-based training via Google for Education

Matplotlib / Seaborn

Data visualization and reporting

Git & GitHub

Version control and project collaboration

Key Modules Covered

01

Introduction to AI

History, scope and real-world applications of Artificial Intelligence.

02

Python for AI

Programming essentials and libraries used in AI development.

03

Machine Learning Basics

Supervised & unsupervised learning, regression and classification.

04

Data Preprocessing

Cleaning, transforming and preparing datasets for modeling.

05

Neural Networks

Fundamentals of deep learning and neural network architectures.

06

Model Evaluation

Accuracy, precision, recall and performance tuning.

Project Work Undertaken

[Add specific detail here: name and describe the hands-on project or mini-project you built during the internship — the problem statement, dataset used, and the AI/ML approach applied.]

Skills Gained

Technical Skills

- Python programming for AI/ML
- Data preprocessing & analysis
- Building & training ML models
- Using AI frameworks (TensorFlow, scikit-learn)
- Version control with Git/GitHub

Professional Skills

- Analytical & structured problem-solving
- Self-directed learning & research
- Time management under deadlines
- Documentation & reporting
- Collaboration in a remote, mentor-guided setup

Challenges Faced & Solutions

CHALLENGE	HOW IT WAS ADDRESSED
Learning curve of new AI/ML concepts	Followed structured modules and practiced with small, guided exercises daily.
Debugging model & code errors	Used official documentation, community forums, and mentor guidance to resolve issues.
Managing the 1-month timeline	Broke the internship into weekly milestones to stay on track.

Key Learnings & Outcomes

Conceptual Clarity

Developed a clear understanding of core AI and ML principles.

Practical Exposure

Translated theory into working code through hands-on practice.

Industry Readiness

Gained familiarity with real-world AI workflows and best practices.

Certification

Successfully completed an AICTE & ICAC approved internship.

Certificate of Internship

Conclusion

This 1-month Artificial Intelligence internship with Codec Technologies Pvt. Ltd., delivered through the AICTE & ICAC approved National Internship Portal in association with Google for Education, provided a strong foundation in AI and Machine Learning concepts alongside practical, hands-on project experience.

The program strengthened both technical and professional skills and offered valuable insight into how AI is applied in real-world, industry settings — knowledge that will directly support continued learning in the B.Tech CSE (AI-ML) program.

Thank You

Questions & Discussion
